

AS-1250FE Datasheet

Dynamic Signal Acquisition Front-End for Rotating Machinery Monitoring and Analysis

HIGH PERFORMANCE ACQUISITION

The AS-1250FE is a high performance, compact and flexible data acquisition hardware platform used by Alta Solutions' powerful machinery monitoring and analysis software products.

STATE OF THE ART HARDWARE

This unit can simultaneously capture up to 40 dynamic signals using highly accurate 24-bit analog to digital converters. The AS-1250FE can be configured to have multiple phase marker inputs to tackle multi-speed applications such as split-shaft machines or gearboxes. These phase marker inputs provide both position and speed.

COMPACT AND INDUSTRIAL DESIGN

Specifically designed for industrial applications, this rugged unit can be ordered with rubber bumpers for portable applications or with DIN rail or bulkhead mounts for installations close to the machinery skid; minimizing sensor wiring, reducing ground loops, cable attenuation and cross talk.

ETHERNET CONNECTIVITY

The AS-1250FE communicates to a PC via a standard 10/100Mb Ethernet port connection (RJ45). An optional fiber optic Ethernet port is available allowing long distance transmission of data up to 2 km (1.2 miles).

SENSOR SUPPORT

This unit supports a wide range of industrial sensors, including accelerometers, displacement (proximity) probes, and pressure transducers. Each channel incorporates anti-aliasing, overload protection and configurable coupling (AC, DC or IEPE).
